

Olympics Dataset Queries with Outputs

1. Print schema of the dataset

```
Athlete\tAge\tCountry\tYear\tClosing Ceremony Date\tSport\tGold Medals\tSilver Medals\tBronze Medals\tTotal Medals
dtype: object
```

2. Show only first 5 rows

```
Athlete\tAge\tCountry\tYear\tClosing Ceremony Date\tSport\tGold Medals\tSilver Medals\tBronze Medals\tTotal Medals
```

3. Select specific columns (Athlete, Country, Sport)

```
Athlete\tAge\tCountry\tYear\tClosing Ceremony Date\tSport\tGold Medals\tSilver Medals\tBronze Medals\tTotal Medals
```

4. Filter athletes with more than 5 total medals

```
Empty DataFrame
Columns: [Athlete, Age, Country, Year, Closing Ceremony Date, Sport, Gold Medals, Silver Medals, Bronze Medals, Total Medals]
Index: []
```

5. Count medals won by each country

```
Empty DataFrame
Columns: [Athlete, Age, Country, Year, Closing Ceremony Date, Sport, Gold Medals, Silver Medals, Bronze Medals, Total Medals]
Index: []
```

6. Average age of athletes per sport

```
Empty DataFrame
Columns: [Athlete, Age, Country, Year, Closing Ceremony Date, Sport, Gold Medals, Silver Medals, Bronze Medals, Total Medals]
Index: []
```

7. Maximum gold medals won by a single athlete

```
nan
```

8. Order athletes by total medals (descending)

```
Athlete\tAge\tCountry\tYear\tClosing Ceremony Date\tSport\tGold Medals\tSilver Medals\tBronze Medals\tTotal Medals
```

9. Number of athletes per country

```
Empty DataFrame
Columns: [Athlete, Age, Country, Year, Closing Ceremony Date, Sport, Gold Medals, Silver Medals, Bronze Medals, Total Medals]
Index: []
```

10. Athletes who won at least 1 medal of each type

```
Empty DataFrame
Columns: [Athlete, Age, Country, Year, Closing Ceremony Date, Sport, Gold Medals, Silver Medals, Bronze Medals, Total Medals]
Index: []
```
